

ERGO DOOR LIFT

The labour-saving and fully autonomous system for fitting and removing heavy doors.

UNIVERSAL COMPATIBILITY

Doors measuring up to 206 cm in height can be lifted effortlessly. The large sliding side doors of vans are also compatible when fitted with the optional extension bar (082700).

WORK WITH TOTAL AUTONOMY

Removing or installing a heavy door, a procedure usually requiring two people, can now be carried out by a lone individual in complete safety.

100% DOOR PROTECTION

Rubber bumpers on the top and bottom arms of the unit protect and stabilise the door, as well as protect the paintwork.

ULTRA-SIMPLE MANIPULATION

The crank mechanism is used to accurately position the door. Quick-release catches keep the door secure without bracing it, so making adjustments is easier.

EXCELLENT MANOEUVRABILITY

4 swivel wheels, 2 of which have brakes, ensure easy movement and secure positioning as close to the vehicle as possible.

REDUCES PHYSICAL STRAIN

Support-assisted material handling reduces the risk of musculoskeletal disorders (MSDs), and back pain.

Made in France

- // Safe working load (SWL): 50 kg
- // Door thickness: 30.5 cm max.
- // Width of wide/sliding doors: 173 cm max. (with 082700 option)
- // Compact base: 12 cm height from the ground to fit all vehicles.
- // Weight: 40 kg
